

SPECIAL ISSUE

ARCHITECTURAL SSL

AT THE FRONT

Major advances are occurring on the manufacturing side of SSL that are helping drop the price of LED fixtures significantly.

SSL RISES

DEE's latest round of CALIFIX lighting takes a look at TACOS lighting replacement and reports pretty positive findings overall.

WHITE PAGES

To be deeper than the category, we're addressing the possible negative effects of electric light on human paintings and artwork.

THE 2013 PRODUCT INNOVATION AWARDS

CLEAR

CUT

WINNERS

Now in our third year, we've seen a maturation of products, several new entry types not seen before, and a lot more products in application. **[Page 22]**

- 1 SSL Base: Culvers Puts LED in the Mix.
- 2 SSL Base: The W San Fran Delivers Wow Factor.
- 3 White Pages: 3D Printing Impacting SSL.

CATEGORY: DOWNLIGHTS

USAI Lighting

BeveLED 2.0 Warm Glow Dimming

This LED dimming system achieves what was once thought impossible within the lighting industry: It makes LEDs indistinguishable from fixtures using an incandescent or halogen light source when dimmed. In fact, it gradually transitions from 2700K, 3000K or 3500K down to 2200K, as compared to the 2800K down to 2000K transitioning found within incandescent light sources—all while providing significant energy savings. An interchangeable reflector system gives the user the ability to change the beam from 30°, 50° or 80°.

Judges' Comments: *"This is an advancement in getting LED to act like incandescent, which is what is needed for high-end retail to accept it!"*
