Solutions

10.01.14 by Jeff Ferenc

Vendors offer a wide selection of new lighting, infection prevention and carpeting products for the health care environment.

Lighting

Bright choice

Color Select is a proprietary LED technology that allows users to adjust white light in recessed fixtures over the broadest possible color temperature range, from 2200K (similar to candlelight) to 6000K (like mercury vapor). Users can control intensity from 100 percent down to 0.1 percent, using either standard roomside dimmers or programmable apps and control systems.
