## USAI launches block shaped LED ceiling lights

**Oct 28, 2016:** BeveLED BLOCK from USAI Lighting provides an elegant solution for those that love the industrial exposed ceiling style, but hate the exposed electrical connections. The innovative, unique design of BeveLED BLOCK completely encloses surface mounted junction boxes in concrete ceilings, creating beautiful modern spaces with high performance LED lighting.

BeveLED BLOCK's practical, adaptive design allows for field configuration of the side conduit cutout slots, so that integration with multiple conduit branches is easy and convenient. BeveLED BLOCK is a petite 5" x 5" square, and typifies USAI Lighting's industry-leading performance with 4W and lumen packages available.

BeveLED BLOCK is capable of emitting lighting in classic white light color temperatures ranging from the warm firelight of 2200K to the cool clean 6000K of daylight, as well as USAI Lighting's patented dim-to-warm Warm Glow Dimming technology – and beam spreads ranging from 25° to 90° are possible. BeveLED BLOCK is ideal for any residential or commercial area, including lofts, offices, open architectural spaces and other high-ceiling environments.

For a more refined and finished look, BeveLED BLOCK can be specified with solid sides for ceilings with recessed conduits and can complement any decor with its variety of available finishes in white, black, grey, bronze, and custom colors. BeveLED BLOCK joins USAI Lighting's growing and innovative family of award-winning BeveLED architectural lighting solutions.
