LittleOnes

What the iPhone was to the cell phone industry, the LittleOnes is to the home technology and lighting industry. The first collection of tiny, architectural-grade recessed ceiling-light fixtures, it is capable of delivering more than 1000 lm. Suitable for homes, offices and public spaces, the LittleOnes LED lights are a full line of fixtures, all with apertures of less than one inch. Features include ceiling-to-floor wall wash from a less than 1-in. aperture achieved through a five-part optical system; adjustable and dimmable lights; and square and round wall wash options. Four fixtures light a 100-sq.-ft. space.
