USAI Lighting's LittleTwos lights join the sister lines of the LittleOnes and the LittleOnes Micro Doubles. (USAI Lighting)

LED lighting manufacturer USAI Lighting has launched LittleTwos lights. Joining the sister lines of the LittleOnes and the LittleOnes Micro Doubles, this new collection includes 2" aperture pinholes and 2" diameter cylinders. The line delivers up to 2,000 lumens with advanced glare control. The lights are available in a range of options—including trim styles and configurations, beam spreads and housing—and are compatible with most architectural control systems.

The recessed pinholes allow for easy installation and service in nearly all site conditions, with a complete family of housings for new construction and install-from-below options. The entire product offering meets WELL Building Standards.
