Complementing its LittleOnes and the LittleOnes Micro Doubles products, USAI Lighting has introduced its new LittleTwos line of lighting products.

The N.Y.-based manufacturer states that its latest product line provides professional integrators, lighting designers, and other industry professionals a selection of 2-inch aperture Pinholes and 2-inch diameter Cylinder products that offer high levels of performance in a small package. The new LittleTwos LED lights produce 2,000 lumens of brightness with glare control capabilities to help the products blend comfortably into smart home environments without any issues.

USAI Lighting points out the products are available with a choice of options that include trim styles, configurations, beam spreads, and housings, and the company notes, the LED lights are compatible with modern home control and automation systems.

The company also emphasizes that it is complementing its 1-, 2-, 3-, 4-, 5-, and 6-inch products with the LittleTwo line of products to enable residential market professionals the ability to address any lighting situation in today's smart home industry.
