Warm Dimming Tiers

USAI's new Warm Dimming offerings provide a tiered selection based on color quality, dimming options, performance, and price. Created to meet the needs for every project and budget, specifiers now have two Dim-to-Warm options in addition to USAI's proprietary Warm Glow® Dimming.

Visit usailighting.com/warmglow for more details.

Controls and Dimming

Consistent with all USAI products, the entire **Warm Dimming** product line is specifically designed for compatibility with all standard architectural dimming controls: 0-10V, Phase, DMX, and DALI platforms.

Warm Glow Dimming precisely mimics the black body curve of a standard 100W A19 lamp by gradually transitioning from 2700K or 3000K down to 2200K. The result is virtually indistinguishable from halogen and incandescent light sources -- Providing the ideal ambiance occupants desire for residential, hospitality, and restaurant applications. →
