SOPHISTICATED CEILINGS

Armstrong Ceiling Solutions has introduced an array of new ceiling panels pre-cut to integrate with trimless downlights. Center Cut panels allow architects and designers to achieve the smooth look of a flangeless downlight in suspended ceilings. In addition to providing the look of drywall, the panels offer the added benefits of accessibility and acoustical performance. The panels are pre-cut in the center with either 3.5-in. or 5-in. square or round openings designed to seamlessly integrate exclusively with the trimless BeveLED family of downlights manufactured by lighting partner, USAI Lighting (right). Armstrong has also partnered with 16 new manufacturers to offer a myriad of lighting systems to meet a variety of applications. Other product partnerships include sound masking systems, flexible sprinkler connections, virtual skylights, radiant heating and luminous or alternative surfaces. **Circle 362**
