MINI SCALE WITH SUPER-SIZED PERFORMANCE: USAI Lighting is thinking big with the creation of the BeveLED mini, the newest addition to its BeveLED family of groundbreaking LED downlight, adjustable, and wall-wash fixtures. Small yet powerful, BeveLED mini delivers more than 1000 lumens at 20 Watts (51 lm/W) from a mere 1.5" optical aperture. The mini is capable of delivering a perfect 10-degree beam equal to any MR-16 or metal halide source with medium (25°-35°) and wide (50°) beams for more uniform ambient light.

Moreover, when specifying one of USAI's patented, award-winning technologies, the full potential of LED is unlocked. For instance, the BeveLED mini with Warm Glow™ Dimming transitions from warm to warmer (2700K or 3000K down to 2200K), mimicking to perfection an incandescent lamp; while the BeveLED mini with Color Curve Dimming™ goes a step further by integrating cool color temperatures — 3500K to a warm 2200K — delivering an indistinguishable replacement for compact fluorescent sources. Fixture-to-fixture color consistency is assured, and each product is rigorously tested for dimming compatibility with major architectural control systems.

As sustainable as it is powerful, the BeveLED mini meets strict LEED® certification criteria, Title 24 requirements and other energy codes. Multiple reflector and lens options also are offered. The USAI BeveLED mini is ideal for installation in retail stores, museums, restaurants and high-end residential projects.
