Customized lighting

Infinite Color+ LED products combine high-performance white light with every color in the spectrum. From pale pastel pinks to super-saturated sea foam greens to crisp whites, custom lighting possibilities are reportedly endless. The system provides tunable white light from 1,800 K to 12,000 K+, as well as light that is full of saturated colors, light pastels, and subtle hues. The lighting uses an industry standard DMX512 control system.
