Delivered with a four-part patented optical system, the new TrueZero360 product family has more than 2,000 lumens. (USAI Lighting)

LED lighting manufacturer USAI Lighting has just released TrueZero360, its newest collection of low-profile recessed lighting. Designed with USAI's new recessed lighting aesthetic, TrueZero360 floats along the ceiling plane, with one singular identity for all offerings—downlight, wall wash and adjustable options.

Delivered with a four-part patented optical system—Quiet Comfort Optics—this new product family has more than 2,000 lumens. Designers can choose from Truly Zero Trimless zero regress and Truly Subtle three-eighths-inch regress, trim options and a variety of finishes.

The light is evenly and fully directed on the wall—evenly up high and wide where the wall meets the ceiling, and evenly down low to where the wall meets the floor. The wall is illuminated with 360-degree glare-free light from all viewing angles and directions with virtually no backlight spilling into the room.
