

USAI Lighting LittleOnes Micro Doubles

December 24, 2022

Award-winning LED lighting manufacturer **USAI Lighting** expands its breakthrough LittleOnes collection of tiny but mighty recessed fixtures with LittleOnes Micro Doubles: two miniature downlights that double LittleOnes luminosity. Designed with a diminutive 1.25-in. aperture and delivering up to 1600 lumens, the power couple packs a punch while offering the brand's signature glare control technology and 'barely there' design appearance. Compared to traditional light fixtures—which are often bulky and distracting—LittleOnes Micro Doubles are a small-scale solution with powerful light quality for commercial and residential applications.

Available in a variety of styles and combinations—Double Downlights, Double Adjustables, Double Wall Wash or mixed and matched with Downlight and Wall Wash—Micro Doubles offer flexibility to address designers' needs in numerous spaces. Double Downlights provide superior general ambient illumination with superior glare control providing optimal light levels quietly. Double Wall Wash features LittleOnes Micro's proprietary four-part optical system to achieve even wall lighting for navigating pathways and illuminating artwork.

LittleOnes Micro Doubles provide options for interior designers, architects, and architectural lighting specifiers that meet the requirements for nearly any project:

- Complete coverage wall wash – uniform vertical light from ceiling to floor, achieved through USAI's proprietary four-part optical system
- Smooth, flicker-free dimming down 0.1% for mood and ambiance
- Adjustable, aimable spotlighting to highlight art and architectural features
- Square and round aperture shapes to suit aesthetic preferences
- Trimmed and trimless styles to work with any ceiling material
- Excellent optical design for smooth beams from narrow to wide, to eliminate scalloping, shadows and backlight
- Ability to beautifully illuminate large-scale spaces with ceiling heights up to 14 feet, achieving high light levels with standard fixture placement and spacing
- Visual comfort with significant glare control
- Efficiency and standard output with one remote driver per light fixture (both fixture heads dim and switch together)
- Flexible independent switching and dimming for the two fixture heads, with two remote drivers per light fixture (one per head)
- Standard output with one integral dimming driver per light fixture (Above ceiling access required for service to the driver. Available with trimmed fixtures only.)
- Classic White and Dim-to-Warm+ LED color options

USAI Lighting is committed to helping its customers meet sustainability goals now and in the future through innovative and energy-saving light fixtures. In support of that goal, the company has worked with the International Living Future Institute to achieve Red List Approved Status for a wide range of its products, including the LittleOnes Micro Doubles. USAI Lighting products that have received this classification are identified with a Declare label and are approved for use in Living Building Challenge projects.
