

USAI Lighting LittleOnes Micro Double Lighting Fixtures

COMPANY: USAI Lighting

USAI Lighting has announced its new LittleOnes Micro series of recessed lighting products.

Adding to its selection of small, recessed lighting fixtures, USAI Lighting has introduced its new LittleOnes Micro Double Lighting Fixtures.

The newly announced lighting products deliver two miniature downlights that double LittleOnes' luminosity. USAI Lighting explains the LittleOnes Micro Double lighting fixtures are designed with 1.25-inch apertures and they are capable of producing up to 1,600 lumens. The New Windsor, N.Y.-based company states the new lighting products incorporate its proprietary glare-control technology.

According to [USAI Lighting](#), the new lighting fixtures are available in a number of styles and combination, including double downlights, double adjustables, double wall wash or a mix-and-max with downlight and wall wash. USAI Lighting boasts the LittleOnes Micro Double products offer lighting designers, integrators and other professionals the flexibility to address a range of residential and commercial spaces, while controlling glare.

Some of the other features the new lighting products offer include trimmed and trimless styles to integrate into any ceiling material and environment, as well as square and round aperture shapes, and flicker-free dimming down to 0.1%.

USAI Lighting adds that it has worked with the International Living Institute to achieve Red List Approved Status for a number of its products, including the LittleOnes Micro Double lighting fixtures.
